- 42. 14 units
- 43. (1, 6)
- 44. OPEN_RESPONSE: The x-axis is the horizontal number line and the y-axis is the vertical number line. Together they form a grid that helps locate points using ordered pairs.
- 45. OPEN_RESPONSE: Yes, because all four sides are 3 units long and the angles are right angles.
- 46. 24
- 47. $2\frac{2}{3}$ cups or $\frac{8}{3}$ cups
- 48. 5.15
- 49. (-4, 3)
- 50. OPEN_RESPONSE: Swapping the coordinates moves the point to a different location because the first number is the x-coordinate (horizontal) and the second is the y-coordinate (vertical).
